Certificate of Sterilization for Instrument Repairs (CofSR)

OSHA Standards (29 CFR 1910.1030) require used instruments to be sterilized prior to shipping.

OSHA Bloodborne Pathogens Standard (29 CFR 1910.1030) requires the use of appropriate sterilization on potentially contaminated equipment and instrumentation prior to transporting. This is necessary to ensure that equipment is in a condition that makes it safe to be handled by all personnel who may have contact with it during transit and subsequent handling. All used surgical equipment is assumed to have potential exposure to blood or other potentially infectious materials.

Instructions:

1. Sterilization and CofR for used instruments must be completed by the enduser.
2. Sterilize used instruments using OSHA-approved protocols.
3. Complete checklist below and enclose original CofR document with returned instruments.

Sterilization of instrument(s) for shipment to gSource has been performed as above.

Sterilization performed by:

Print first and last name: _____

Signature: _____

Facility name: _____

Phone: _____ Date: ____/____/____
